20 YEARS

ANNUAL REPORT 2025

WELCOME FROM BIANCA MADISON-VULETA VICE PRESIDENT

HOPE, ENERGY, SOLIDARITY: INNOVATION, INSPIRATION AND IMPLEMENTATION

Founded in 2004, we are proudly celebrating 21 years of creating a global non-governmental and non standard network of intelligent and caring voices for social, environmental and economics justice, reform of mainstream economics and creating a multidisciplinary academic narrative of Green Economics.

We are passionately advocating and working tirelessly to raise awareness, educate, mitigate and roll back the tide of runaway climate change, reverse biodiversity and habitat loss, and create an economy which is beneficial for all people in the world, especially women, minorities, and other species, nature, the planet and its systems.

An economy of growth as in nature- that means nature flourishing, not using corporate politics as an excuse to destroy natural habitats, or perpetuate wars in the name of progress.

Instead of mainstream one dimensional narratives of growth, which are causing untold suffering and destruction - we are working for a flourishing world for everyone and everything on the planet - a world in which we can be proud of our human influence!

We are grateful to all our supporters, members and collaborators all across the globe.

Thank you so much for your well wishing for our 21st anniversary and looking forward to another 21 years at this crucial time in human history.

WELCOME FROM PROFESSOR DOAA SALMAN, EGYPT A LONG STANDING MEMBER OF GEI

As we navigate the complex polycrises of 2025, the Green Economics Institute's mission has never been more critical. We are not merely an organisation; we are a global movement dedicated to reinventing economics for the 21st century.

Our core strength, as our President, Miriam Kennet, consistently champions, is a radical multidisciplinary approach. We move beyond sterile, traditional models to integrate ecology, social justice, gender equality, and global voices into the heart of economic discourse. We understand that an economic system that degrades nature and widens inequality is a failed system.

The GEI, through its trusted journal, events, and research, provides the essential platform for this vital work. We are widening the scope of economics to be inclusive and practical, amplifying perspectives from the Global South and frontline communities who bear the heaviest burden of ecological and economic breakdown.

In 2025, our role is to provide the robust, practical frameworks needed to build regenerative economies that serve both people and the planet. Under Miriam's leadership, we are the catalyst for the transition, turning critique into actionable solutions for policymakers, businesses, and communities.

Thank you for being part of this essential journey.

Doaa Salman Abdou, Ph.D., FHEA
Professor of Financial Economics

WHO WE ARE: THE GREEN ECONOMICS INSTITUTE

HOPE, ENERGY, SOLIDARITY:
INNOVATION, INSPIRATION AND IMPLEMENTATION

WHO WE ARE: THE GREEN ECONOMICS INSTITUTE

We are a formally constituted Institute under the Secretary of State, which mean we work to what they call the highest levels of excellence, and they have just reaffirmed this this year again. Institute is a 'sensitive name' in the Uk and can only be used on agreement by the Secretary of State etc. We run the worlds longest running and most successful green double blind peer reviewed multi and interdisciplinary academic journal. The International Journal of Green Economics which has morphed into a general green academic journal. We are also founder members of the European Network of Political Foundations (ENOP) and Green European Foundation (GEF) both based in Brussels.

We are extremely active at the United Nations running very large delegations often larger than most countries, to COP, climate conferences, and to The IPBES eg 12 - which deals with biodiversity and ecosystems as they seem to like our narratives and quality, real diversity and real insight into the issues and solutions. We also have started with delegations to their financing for development and we are an official RINGO which is a Research International Organisation of the United Nations etc. We take part in high level diplomacy, policy and creating narratives that the UN adopt etc. eg Paris climate conference.

We are active at the University of Oxford in two ways, one through membership of a committee for the development and vision of a college of the University and one through our Institute having a collaboration with a department of the University in which we are deeply embedded too and active.

We are incredibly active and sought after by almost every government on the planet, so this section just outlines some highlights of what we do and a fraction of the impact we have had globally.

We have a unique and considerable global network and multi disciplinary academic and policy hub, and -we have many academic contacts and hubs in South America and Africa and also Asia in our network.

There are a number of reasons we would like to expand our collaborations with other Institutes and Universities and organisations, which might include some educational joint courses, qualifications, certificates, diplomas etc, plus perhaps having one of our annual conferences at other campuses and much more besides.

Miriam Kennet
The Green Economics Institute

Overview of the Green Economics Institute

The Green Economics Institute (GEI) was founded in 2003 as an international institute to create ideas and philosophy for social environmental and economic justice and fairness world wide, and for a green economy and green economics, and green solutions, green jobs and green careers.

Its mission:

is to promote ecological, social and economic justice; to reform mainstream economics toward sustainability, inclusion, and justice; to address climate change, biodiversity loss, inequality, and reconstruct an economy and a world view that serves people, nature, and the planet.

It operates globally via a network of academics, researchers, activists, students, professionals, policy makers, implementers and out of the box thinkers at all levels from all walks of life. It operates as a friendly warm family meeting weekly all over the world.

GEI is more than a think-tank: it runs education and training programs; a publishing house; an academic journal; conferences; internships; field-trips; and various events — aiming to build capacity for new ideas and innovations to make the world a better place and to consider the implications and implement “green economics” worldwide. ‘

2026 Strategic Priorities & Educational Goals

GEI's educational strategy in 2026 emphasizes:

Expanding access and inclusivity: by offering remote/distance education, remote internships, and welcoming participants from diverse backgrounds and geographies. Bridging academic theory and practical activism: through conferences, internships, event organisation, policy-oriented research, media (journal, TV station) — not just teaching in abstract.

Capacity building in “green economics” globally: educating new generations (students, interns, scholars) to adopt sustainable, socially just, ecological economics — building a cadre of green economists, activists, policymakers, researchers, communicators.

Producing output and visibility: via publications (books, journal articles), public events, media, policy interventions — ensuring that academic work leads to real-world impact.

Flexibility and user-centred design: offering variety in programmes (short courses, long courses, internships, remote or on-site, publishing-focused, admin-focused, research-focused), to cater to different backgrounds, life-circumstances, and goals.

WHO WE ARE: THE GREEN ECONOMICS INSTITUTE

A MESSAGE FROM THE EDITOR

Aayushi Singh

Empirical research clarifies the risks of inaction and the feasibility of rapid transitions has only made the case for green economics stronger in the past year. Well-designed climate policies can reduce emissions while protecting jobs and vulnerable households, according to peer-reviewed work on carbon pricing, green industrial policy, and just transition, challenging the conventional wisdom that environmental ambition necessarily comes at the expense of economic welfare. Researchers also quantify the mounting costs of extreme weather, biodiversity loss, and air pollution in leading environmental economics journals, underlining that "doing nothing" is now the most expensive option on almost any metric.

Meanwhile, emerging green economics literature has moved beyond narrow cost-benefit frames to centre distributional impacts, health and intergenerational justice. Work in the International Journal of Green Economics and related outlets underlines how policies – such as carbon taxation, fossil-fuel subsidy reform and investments in green infrastructure – can be designed to reduce inequality and improve public health where revenues are recycled towards low-income groups and public services. As you will be aware from wider evidence in environmental and development economics, this reflects the broader consensus that those communities facing the greatest climate risks are often those least responsible for emissions, making climate policy at heart a question of fairness as much as efficiency.

In line with this shift, the publications and events from the Green Economics Institute in the past year have focused on evidence-based and justice-oriented transitions. Recent books and handbooks published by its publishing house detail practical examples of cities, regions and sectors using green economic tools-from alternative budgeting and local energy markets to nature-based solutions-to cut emissions and improve livelihoods simultaneously.

For the reader familiar with policy analysis of energy transition, trade and decarbonization, these case studies connect directly to broader debates about green industrial strategy and the optimal design of international cooperation on climate.

This annual report therefore presents not only a vision but a growing body of concrete, cited work which shows how green economics can guide policy choices under real-world constraints. The contributions collected here draw on empirical methods, interdisciplinary theory, and lived experience to show that it is both analytically robust and practically achievable to reorient our economies around climate stability, social justice, and biodiversity. It is hoped that this evidence base equips you-as researchers, practitioners, students, and decision-makers-to push for policies that are not just "greener" in rhetoric but demonstrably effective in delivering a safer and fairer future.

With kind regards,
Aayushi Singh
The Editor

EDUCATION AND ACADEMIC LIFE AT GEI 2025/2026

Educational Activities in 2026

The 2026 “Education” and “Events & Activities” include the following educational programmes and activities will take place this year

Programme Offerings & Opportunities

Internships, Work Placements, Visiting Scholars, Students Programmes

GEI is recruiting for 2026 “study placements, traineeships, publishing traineeships, charity-work, volunteers, work placement and Interns and Visiting Scholars and students of all ages and backgrounds.”

These programmes provide real-world experience: administrative work, event & conference organisation, policy research, writing & publishing, fundraising, volunteering, and more.

Pathways include working remotely (zoom-internship or distance learning), or in-person placements, depending on candidate background and circumstances.

Academic and Research Training

GEI offers opportunities for postgraduate, post-doc, and visiting-scholar research. Scholars can contribute reports, policy statements, research papers; some will be published under the Institute’s publishing arm.

Interns and students may also participate in academic publishing — contributing to books, chapters, academic articles, and the Institute’s own peer-reviewed academic journal.

There are also short courses / training modules, including “1-day courses,” short-term workshops, and (when possible) longer courses.

Educational Pathways

GEI proposes (or is developing) more formalised educational pathways: undergraduate, master’s, and PhD programmes — though some remain “in development.”

Continuous Professional Development & Certification

GEI offers professional qualification courses: e.g. “GE Green Economist (GEI)” or “M.GEI — Member of the Green Economics Institute” designations following certain courses or exams.

Course formats are flexible: remote study, work-based placements, short intensive courses (during conferences), or longer periods.

Participants may on selected programmes, receive certificates, feedback, and — if needed — references for their universities or employers.

Dr. Ehtesham Abbasi.

PhD (Accounting), Master of Finance & Control

**Assistant Professor of Accounting, School of Business Administration, Al
Akhawayn University, Ifrane, Morocco**

EDUCATION: PUBLISHING, WORK EXPERIENCE, INTERNSHIPS 2025/2026

Publishing & Academic Output

GEI maintains a publishing house with over 100 titles (books, academic proceedings, papers).

Its unique world leading double blind peer-reviewed academic journal (the International Journal of Green Economics) provides a platform for scholarly articles, research results, and academic debate in the field of green economics.

Educational participants (interns, students, scholars) are encouraged and often given opportunities to publish — either standalone books, chapters, or journal articles, sometimes in collaboration with senior scholars.

Conferences, Workshops, Events, Webinars, Field-Trips

GEI's calendar for 2026 shows a robust events schedule — including conferences, workshops, panel debates, member evenings, webinars, field trips, virtual tours.

Through these events, students / interns / members get practical exposure: participating in panels, presenting research, networking, engaging in activism and policy dialogues.

This helps tie academic study and research with practical activism and real-world policy engagement — reinforcing GEI's mission of combining economics, ecology, social justice and activism.

Remote / Distance Education & Global Participation

Recognising global membership (75% outside the UK), GEI offers remote/distance education, remote internships, remote placements — enabling people worldwide to engage with its programmes as well as in person routes.

This approach reduces carbon footprint (less travel), increases accessibility, and aligns with the Institute's green and inclusive ethos.

2026 Strategic Priorities & Educational Goals

GEI's educational strategy in 2026 emphasizes:

Expanding access and inclusivity: by offering remote/distance education, remote internships, and welcoming participants from diverse backgrounds and geographies.

Bridging academic theory and practical activism: through conferences, internships, event organisation, policy-oriented research, media (journal, TV station) — not just teaching in abstract.

Capacity building in “green economics” globally: educating new generations (students, interns, scholars) to adopt sustainable, socially just, ecological economics — building a cadre of green economists, activists, policymakers, researchers, communicators.

Producing output and visibility: via publications (books, journal articles), public events, media, policy interventions — ensuring that academic work leads to real-world impact.

Flexibility and user-centred design: offering variety in programmes (short courses, long courses, internships, remote or on-site, publishing-focused, admin-focused, research-focused), to cater to different backgrounds, life-circumstances, and goals.

STATE OF THE WORLD -AND OUR ROLE IN PROVIDING SOLUTIONS

CHAIRS ANNUAL REPORT 2025

HOPE, ENERGY, SOLIDARITY: INNOVATION, INSPIRATION AND IMPLEMENTATION 1/1

The Green Economics Institute was established 21 years ago in order to provide a space for thinking about the earth sciences, the physical geography of the earth and the interaction with the human sciences and to create a philosophy and education forum for those who wanted to create a better world.

Today 21 years later it is clear that the some of the features of the earth that we predicted have come about. The conversations run along a fissure of climate change narratives and those who seek to improve things, transform their economies and life styles and roll back runaway climate change and those who don't. The other fissures seem to be those who wish to control continued fossil fuel use and those who don't. Developing narratives include a host of young people and others in the world who are starting to regard humans as just one species on our planet and understand a world of ecologically dynamic interactions between different actors in the natural world of which we are just one part and those who see us as something apart and special and above the natural world. There are many consequences of these world views. However the two biggest drivers of human induced narratives today are the impetus to control others- a form of neo feudal autocracy, even to the extent of driving them into wars they don't want, for no obvious benefit, and a form of neo feudal oligopolistic economics where a handful of rich men control all the wealth, assets, communications and money in the whole world and the rest become poorer and poorer, less healthy and more powerless. The worst thing in all of this is that people are encouraged via social media to participate in their own powerlessness. The role of these oligarchs has been hitherto hidden in plain site. Now the world has sat up and realised what is happening. We hope its not too late.

The modern ownership of Big Data and the Media- rolled into one- has become the driving force of our age combined with the predicted takeover by them of big pharma. This has led to intense public disillusionment and distrust of the very institutions, and experts who could get them out of this mess. Education, research, governments have been subsumed by these oligopolies.

Our message is that people should open their eyes. There is no such thing as a free lunch and all this posting for free on social media has created an absolute monster which needs taming urgently.

MIRIAM KENNET

STATE OF THE WORLD -AND OUR ROLE IN PROVIDING SOLUTIONS

CHAIR'S ANNUAL REPORT 2025

HOPE, ENERGY, SOLIDARITY: INNOVATION, INSPIRATION AND IMPLEMENTATION 2/2

The world is at a cross roads- humans have the power to destroy, distort, they have even driven the earth off its axis, it is showing signs of increased seismic action, huge climate instability, water course alterations, biodiversity movements, crashes in natural populations including some human societies. Our institute will aim in 2026 to guide and help people understand and make sense of where we are and what choices we have to empower a much nicer and more beneficial future for everyone and everything on the planet if we could all only learn to work together nicely instead of behaving like little toddlers faced with something we are very scared of and don't understand. Having a tantrum and launching big wars wont help anything at this point. There are about 32 wars currently raging -and people and other species are getting hurt. As usual there is much 'othering' to make people hate, a sad and base human instinct which can be easily manipulated over time- and it has been.

Lets not let the narrative of hatred and despair drive us away from our goals of a much better fairer more inclusive world which pushes us back from the brink and sets us on a much more optimistic path to the future.

We know that the fundamental building blocks of our economy, our legal systems, our government organisations are often more fitting for the 20th century than the 21st or 22nd centuries- so our mission in 2026 is to reinvent some of these so that they are fit for purpose in the coming decades and centuries. That means realistically absorbing big data and social media and reinventing legal codes to encompass the requirements of contemporary challenges and rethinking financial architectures and mandates for the future as indeed the United Nations has started to do and so has the Green Economics Institute. Todays Main stream Economics theory and practice is built on the need to make a vast profit for shareholders and investors with no regard for its wider impacts. However with the current challenges outlined above- that is and should be bottom of the list. We need a much more fair and equitable world where everyone has enough of what they need and equal changes to do well. Becoming super rich through investment may be something like roulette where the chances of success are tiny. But this is not a successful strategy for humans or our economy. No one needs to be super rich -Admiration for billionaires is entirely misplaced- the admiration should turn towards who does the most good in the world and how we can redistribute the earths resources so everyone and everything on the planet has the resources they need on a daily basis.

STATE OF THE WORLD -AND OUR ROLE IN PROVIDING SOLUTIONS CHAIRS ANNUAL REPORT 2025

HOPE, ENERGY, SOLIDARITY:

INNOVATION, INSPIRATION AND IMPLEMENTATION 3/3

We need to transform every aspect of our lives to create a more meaningful existence on this planet and to think about the kind of world we really want and what we individually are doing on a daily basis to thwart that -for example investing in a pension which continues to support fossil fuel usage, or reading media which supports more wars and more destruction of nature or more oligopolistic economic activities and exploitation or slavery in its supply chain. We can all make changes and we can all take much more care about regimes we support and look behind the rhetoric to what is really being said and done.

There were many many heroic acts during the last world war, in completely unexpected places. Lets be the heroic generation which really does manage to transform the human legacy into something we can truly be proud of. Lets come together as a species and support each other. Lets roll back runaway climate change, lets ensure gender equality- women are killed by partners or family every few minutes round the world- receive less pay and a lack of health investment and less opportunity and the current pandemic everywhere is violence against women and girls, lets make the world a more caring and sharing place for everyone and everything to thrive on earth. Many current narrative alternatives tinker at the edges or advocate revolutions- we don't have time for that- we need to reimagine our future with evidence based science -all of which exists already and get on with implementing the changes we need. Kindness, caring and tolerance have been in short supply in 2025 globally- lets reinstate those essential elements which can make our species great again. The Green Economics Institute has done its bit this year, working hard using science and knowledge to start to work towards a much brighter fairer more inclusive and happier world for all the inhabitants and systems of the earth. I am proud of its achievements and impacts in this respect spreading a little joy and knowledge at the highest levels around the world.

MINING FOR METALS – CAN IT BE FAIR?

Online - Saturday 15th May 2021

"Treating the planet as a mine and a dumping ground, with the damage overwhelmingly inflicted on communities repressed by military and economic force, has been a characteristic of human behaviour on this planet for centuries. But its scale has accelerated enormously in recent decades, to the point where it threatens the security of us all. We need to stop extracting our natural resources, and turn to working with natural systems, which, when allowed to flourish, can nourish healthy societies."

- Natalie Bennett, speaker

This event is organised by the Green European Foundation with the support of Green Economics Institute and with the financial support of the European Parliament to the Green European Foundation

WELCOME FROM OUR LOVELY WARM FAMILY TEAM MEMBERS FROM AROUND THE WORLD

WELCOME FROM OUR LOVELY WARM FAMILY TEAM MEMBERS FROM AROUND THE WORLD

REGULAR WEEKLY TEAM MEETINGS FOR OUR INTERNATIONAL TEAMS

Our team meets weekly for drop in and more formal sessions most week throughout the year where members can exchange information and plan events, debates, campaigns, and activities together but its much more than that as we actively support each other for more pastoral events such as if a team member is ill or has family worrries.

This all helped when there was a fire at COP30 and we were able to support our team there and ensure everyone was safe and well.

We see our role as a woman led organisation as being supportive proactively of our team mebmbers and it also makes for a lovely working environment and much more amazing outputs and creativity and out of the box thinking -we see this as an integral part of our unique character as an organisation. It has substantially increased in 2025.

WELCOME FROM ANJIKWI ABOUT OUR IMPACT AROUND THE WORLD AND IN AFRICA

In a world that seems so complex and probably is so because of the diversity of peoples, governments and cultures, it's noteworthy to highlight that we are all in this together. As children, we all once dreamed big and explored as widely in our small world and yet a gigantic planet. We believed we could do anything and change the world to be what paradise we thought it meant to be. The GEI brings us that hope of being able to dream again, only this time, knowing the effect of our previous use of resources and forging the way forward that would be better.

This demands the use of our creativity fuelled by the data, facts and experiences to emerge with ideas, suggestions and a voice that calls to reason, the very foundation of our civilization's survival and our chance to thrive and pass the baton to future generations.

The GEI membership gives us a good platform to learn and share ideas on how to care for our world indeed our planet.

There is space for agreement and disagreement on ideas, issues, perception, science and art. Participation in the institute is being part of the voices that share the strength to take bold steps and make the positive difference that our world needs.

Ideas discussed and birthed in the GEI, experiments open the way for blueprints of practical steps to developing our resources, technology, trade and economy. Our future decisions must recognise the humanity in everyone that may be even more highlighted by the conversations that happen in the GEI. Today the impact of the conversation and conferences, the ideas and the research in the GEI have impacted many from rural areas to urban cities, from local trade to global macro-economics, there is a space for everyone to test their ideas, get feedback and evolve their ideas to what works better for a better world.

Think better green economics, think global progress.

A MESSAGE FROM THE FOUNDER AND CEO OVERALL IMPACT AND INFLUENCE BIGGER PICTURE

Miriam Kennet

We at the GEI are delighted to advise that our Institute is going from strength to strength, year after year. After our wonderful historic event at the House of Lords recently, we have been very active and our network is well represented globally so we can only summarise the headline activities here. Please do join us and get involved with our work.

You will experience the warmth of our amazing interdisciplinary network of philosophers, activists and out of the box thinkers and change makers. In fact it could be rightly termed a very successful epistemic transdisciplinary network and community of practice and practitioners. We have also become officially a Research Organisation of the United Nations and an official NGO listed in the United Nations Register, as well as IPBES and COP UNFCCC in addition to being a Think Tank. The Secretary of State of the United Kingdom has also officially recognised us as an Institute with high quality excellent work outputs.

We are very proud as we helped found The Green Economics Institute 22 years ago, the International Journal of Green Economics 20 years ago (it has become the world's leading green academic journal), the Green European Foundation - a leading Institute in Europe - and also the European Network of Political Foundations, of which we are on the founding document and GEI Climate, which has influenced climate negotiations over the years.

All of these are an enormous source of pride for us, as they have not only survived but have thrived in a world where most did not last through the pandemic. Additionally, our charitable organisation is now 16 years old. We are proud to have influenced many dialogues and policies. Our work is sought after and influential in Africa, Asia, Europe and the Americas where we are very active.

As a publishing house supporting our range of Institute activities, we have over 150 published titles in print, books, magazines etc and from all corners of the Earth, we are truly global and multi and interdisciplinary.

Our initial groundbreaking academic paper written about 20 years ago is now attracting ever increasing numbers of readers as they want to understand and make sense of the huge global changes happening today, most of which we predicted back then.

We are a non standard network of charismatic and kind thinkers who care deeply about the wellbeing of people and the Earth and who have often have had massive challenges or have lived in different environments, countries or regions, which raises and enhances their awareness above the ordinary.

A WELCOME MESSAGE FROM THE FOUNDER AND EXECUTIVE DIRECTOR: OVERALL IMPACT AND INFLUENCE BIGGER PICTURE

We are continuing to attract professionals, active young people, academics, policy makers and campaigners from around the world to support us in our mission to educate the public in social, environmental and economic justice and green economics, as well as the reform of economics according to its mandate.

As the world is experiencing polycrises and growing instability geo politically and geophysically is undergoing numerous transitions, all challenging the stability of almost every aspect of life on Earth, we at the Green Economics Institute are becoming even more sought after to help advise and predict the future trends in all aspects of life.

This year The Green Economics Institute has taken a new strategic route-deciding to work far more collaboratively with other institutions and Universities working on similar issues.

This has meant attending far more events and also working proactively to partner with many excellent organisations. For instance, our United Nations related work has included up to 10 partners at a time for our events, which has meant also partnering with at least 2 government organisations, including in the Caribbean. We are planning partnering with several other organisations in health and care sector next year, which will culminate in a ground breaking project to attempt to change care policy globally.

We are also partnering with one of the top universities in the world in a variety of strategic projects to offer even more options to our members and students. We will be running a month long Summer school in August 2026 to be held at a college of the University of Oxford.

Once again, we will be holding a major conference at The University of Oxford in June 26th -28th 2026. We sincerely hope to see you there.

We are also reflecting on new and innovative ways to enhance our memberships and this will be revamped very shortly. www.geimembership.org

We now have far more students and volunteers and young people than ever before making our activities very lively and raising the quality and vision even more

A WELCOME FROM THE FOUNDER AND CEO OVERALL IMPACT AND INFLUENCE BIGGER PICTURE

We currently have at least 4 books in production and many more coming soon, having over 100 titles already in print. We will be posting information about these on the www.geibooks.org. Our books tend to reflect alternative voices and often have 20 or so authors but from very different and diverse parts of the world.

The Green Economics Institute is increasingly a force for positive beneficial change deeply trusted and sought after. This includes over 5000 wanting to join our United Nations Climate Delegations this year.

Our advice and participate is attracting even more interest than ever before. After 21 years our organisation is in a great position to plan for its next 21 years, up to 2045. We are warmly inviting you to come on the journey with us.

In 2025 we have attracted even more academic articles and papers to our ground breaking academic journal (founded in 2006 -the world's longest running leading green double blind peer reviewed journal).

It is truly an international journal- The International Journal of Green Economics, run for us by an academic publisher. This year The Journal has gained Scopus Registration and many other academic registrations. It has a 3 year waiting list for publication.

A WELCOME FROM THE FOUNDER AND CEO OVERALL IMPACT AND INFLUENCE BIGGER PICTURE

We have also increased our presence at the United Nations with 4 delegations this year with many partners the number of which has also diversified and increased significantly.

We have continued with participation in the Global Climate Finance Group of the United Nations for the second year running.

We also had a delegation to the Bonn SB62 United Nations UBFCCC Climate Conference at the UN European campus in Bonn, Germany. We had an official large delegation to the COP 28 climate conference of the United Nations in Azerbaijan, where we had a large official side event with partners and an official exhibition stand with diverse partners, as well as, for the first time, taking part in other groups' delegations and official speaking side events. We were also very active at COP30 in Belem, Amazonia, Brazil where we took part in 3 speaking events, side events and an exhibition stand, as well as many others' exhibition stands.

We took part in the Financing for Development Conference of the United Nations in Seville, Spain in July 2025. and will work on a book of our findings.

We are taking part in the 44th Annual Green fair at Oxford Town Hall, UK, in November 2025 and the 30th anniversary of Venice International University where we lectured and several Conferences and other events.

We had more interest than ever before in our exhibition stands and delegations to the United Nations our exhibition stands t and delegations to the United Nations.

We are delighted to be making progress with the relaunch of our programmes for students, internships, work experience, fellowships, post doctoral study, research, publications both academic and policy work and Summer schools, qualifications, Masters and PhD opportunities and much more.

We have planned a major conference to be held at the University of Oxford in June 2025 and a month long August 2026 summer school there
Please join us there.

We look forward to meeting you at one of our events or our regular weekly network sessions and so much more at the Green Economics Institute.

LONG STANDING SUPPORTER BARONESS NATALIE BENNETT LAUNCHES HER NEW BOOK

We are very grateful and were thrilled that Baroness Bennett hosted us at the House of Lords last year. She has been a long standing supporter and been active in our institute since the very first event we ran 21 years ago and has written many articles in our magazines and taken part in our delegations to the United Nations. She is a very committed and hard worker and inspirational leader. Her book *change everything* will be an excellent well informed and useful read. We would like to congratulate her on its publication in 2025.

LEADERSHIP IN ACADEMIA

IMPACT AND ACTIVITIES IN LEADERSHIP IN ACADEMIA

An official RINGO (INGO) of the UNFCCC United Nations Climate Conferences and an official NGO of the IPBES United Nations Biodiversity Conferences

- We founded and have the worlds longest running green academic double blind peer reviewed journal, The International Journal of Green Economics <https://www.inderscience.com/jhome.php?jcode=ijge> and www.inderscience.com/ijge
- We have been running Green Education courses and summer schools for 20 years see our education website www.greeneconomicsinstituteeducation.org and www.geiacademy.org
- We have hosted 1000s of students for 20 years including university accreditation, including lecturing at Universities around the world- Oxford, Bolzano, Cambridge, Alicante, and Erasmus schemes and many others and many continue on and become members of our management team. Some of our previous education courses <https://greeneconomicsinstitute.org.uk/education/>
- We have academic conference proceedings from our conferences at Oxford University www.geibooks.org.uk
- We have over 100 books in print with academic and policy and research and general information and discussions in them from all over the world. www.geibooks.org.uk and good bookshops stock our books. www.geibooks.org.uk

IMPACT AND ACTIVITIES IN LEADERSHIP IN ACADEMIA

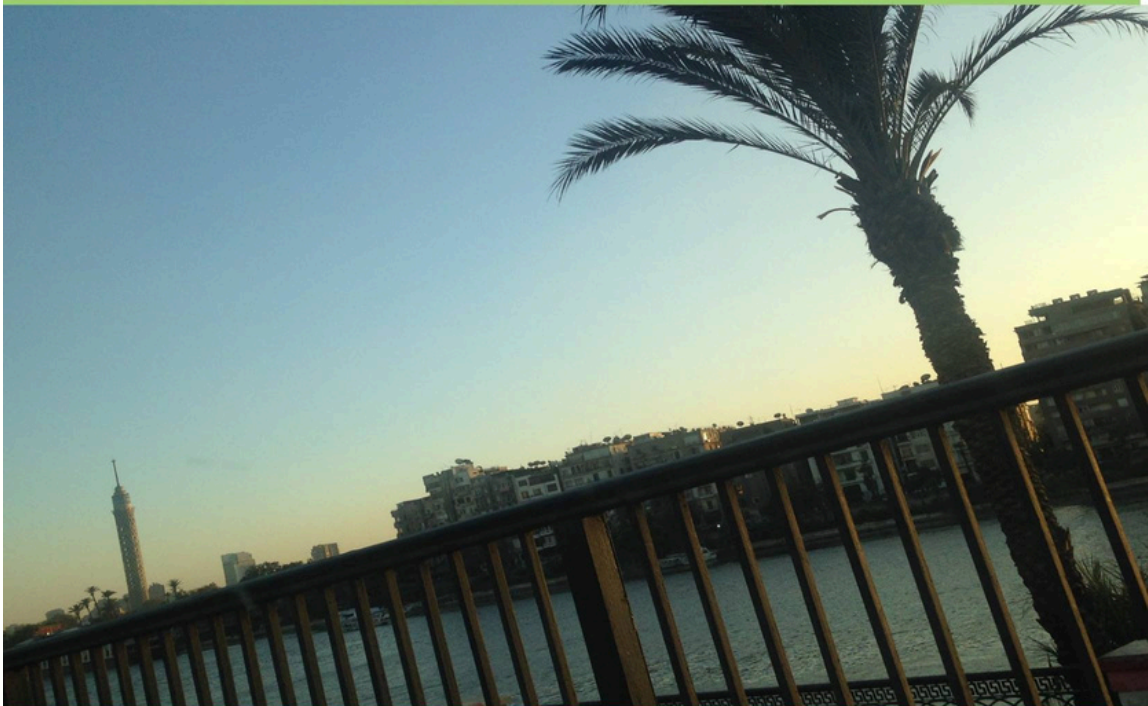

- We have undertaken research over the last 20 years and will be putting links here shortly including with the Birmingham City University <https://www.bcu.ac.uk/built-environment/research/property-planning-and-policies/research-projects/rural-urban-fringe>
- We are list as an official RINGO of the UNFCCC climate United Nations initiative and very active providing official side events at nearly all COPs for the last 10 years and also official exhibition stands almost always too. The information on this is given here: <https://ringosnet.wordpress.com/>
- The list of admitted NGOs and INGOs is here <https://unfccc.int/process/parties-non-party-stakeholders/non-party-stakeholders/admitted-ngos/list-of-admitted-ngos>
- We regularly take part in events at the Environmental Change Institute, University of Oxford and are active members of their alumni community creating new networks.\
- We regularly contribute to events speaking at the Green European Foundation and are founder members of and continue to sit on its Assembly. GEF running many speaker events for them and also running projects researching.
- We are founder members of the European Network of Political Foundations in Europe. ENOP and continue to sit on its Assembly.
- We are active members and speakers of PAWS Pangbourne Sustainability with some of the worlds top climate scientists as members

INFLUENCE AND ACTIVITIES IN EUROPE

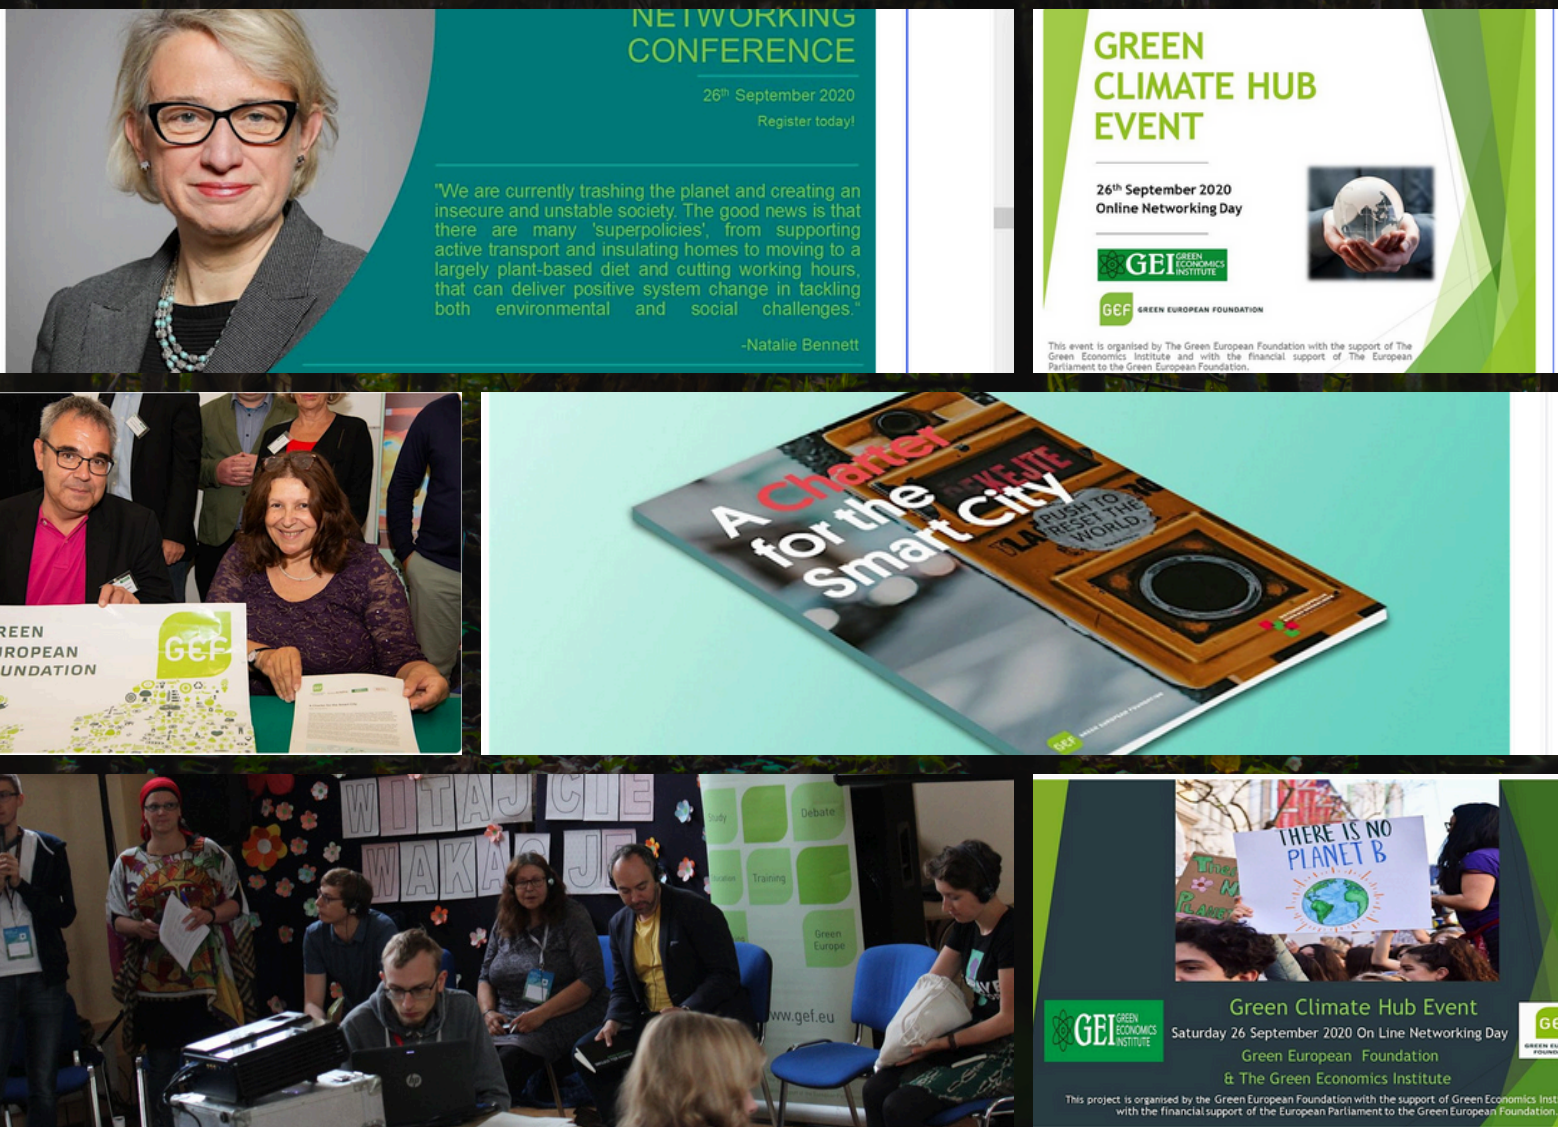

GREEN EUROPEAN FOUNDATION FOUNDER MEMBERS

GREEN EUROPEAN FOUNDATION

About the Green European Foundation

The Green European Foundation (GEF) is a European-level political foundation funded by the European Parliament. GEF is affiliated to, but independent from, the European Green Party and Green movement in Europe. Its mission is to encourage European citizens to participate in European political discussions and in particular when it comes to envisioning what a Green Europe would look like. As a forum for cooperation at the European level, we work closely with our national member foundations and thereby aim to strengthen the Green policy reflections and green ideas in Europe.

EUROPEAN NETWORK OF POLITICAL FOUNDATIONS ENOP FOUNDER MEMBERS

ENoP

EUROPEAN NETWORK OF
POLITICAL FOUNDATIONS

As a network of political foundations, affiliated to different political ideologies across the democratic spectrum, ENoP and its members advocate for the respect of democratic principles and political pluralism inside and outside of Europe. They build bridges, create common grounds and understanding between political and civil society actors in Europe and partner-countries to strengthen core democratic values, and contribute to nurturing pluralistic and inclusive societies.

A Year's Overview

UN SIDE EVENTS BONN AND BELEM

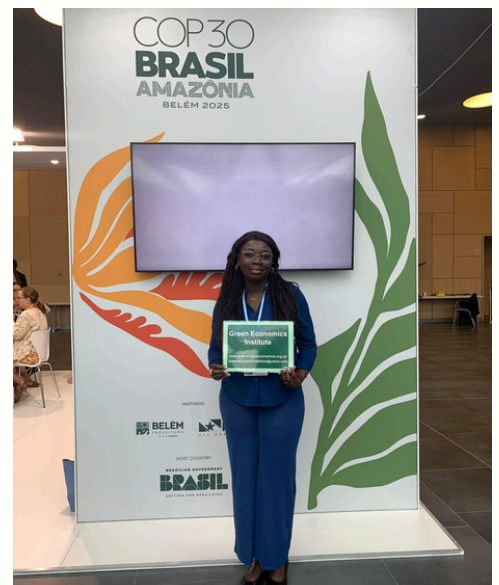

The Green Economics Institute was really active this year at the United Nations producing 3 major delegations, two official United Nations Side Events -one in Bonn at UNFCCC climate headquarters and one in Belem, Amazonia Brazil at COP30 plus a delegation in Seville, Spain as an official UN delegation at the Financing for Development Conference and several other activities under the United Nations. It is planning more in 2026. Here are some photos of our lovely team taking part and giving speeches and hosting more partners collaboratively in our United Nations spaces than ever before.

COP 30, GEI'S UNITED NATIONS DELEGATION TO BELEM, AMAZONIA, BRAZIL

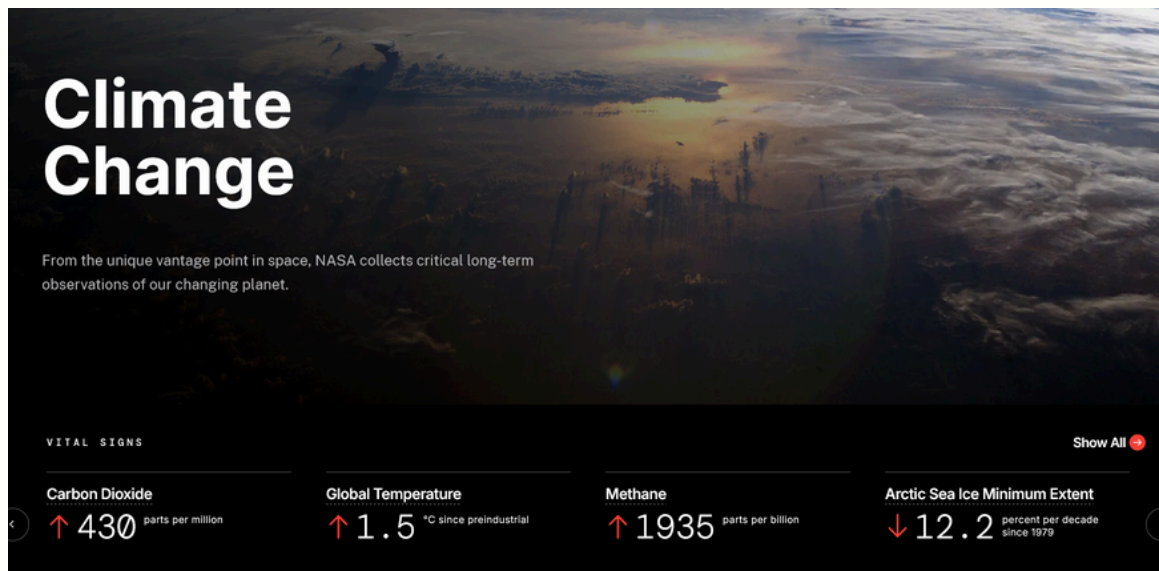

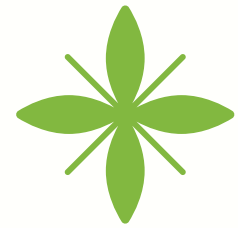

The COP is the supreme decision-making body of the Climate Change Convention. All States that are Parties to the Convention are represented at the COP, at which they review the implementation of the Convention and any other legal instruments that the COP adopts and take decisions necessary to promote the effective implementation of the Convention, including institutional and administrative arrangements. The photos below show some of our wonderful delegates and speakers from around the world and we thank them very much for all their hard work this year.

ASSOCIATION OF GREEN COUNCILLORS

This year we have attended their regular events to learn more about what is happening in councils and governments across the United Kingdom in respect of green economics and social and environmental and economics justice work in areas and perspectives.

In 2024 we ran an exhibition stand at their annual event to advise them about the work we do at the Green Economics Institute.

The photo below was at the Annual Conference in Bradford, UK.

INTERNATIONAL JOURNAL OF GREEN ECONOMICS

Now in its 19th year, the IJGE addresses all aspects of Green Economics, aiming to encourage economic change and positioning Green Economics at the centre of the Economics disciplines. Green Economic theories, policies, tools, instruments and metrics are developed to facilitate a change to the current economic models for the benefit of the widest number of people and the planet as a whole. IJGE focuses particularly on resource management, meeting peoples' needs and the impact and effects of international trends and how to progress social justice.

The journal has done really well in the last couple of years, is now the world's leading green multi disciplinary academic journal and has now received registration to the top academic registers including Scopus, and become very sought after with stiff competition to be published in there. It is published for us by Inderscience an academic journal publisher.

Editor in Chief: Kennet, Miriam, Green Economics Institute, UK

Deputy Editor: Madi, Maria Alejandra Caporale, State University of Campinas (UNICAMP) and World Economics Association (WEA), Brazil
